

helps you put your finger on wasted energy

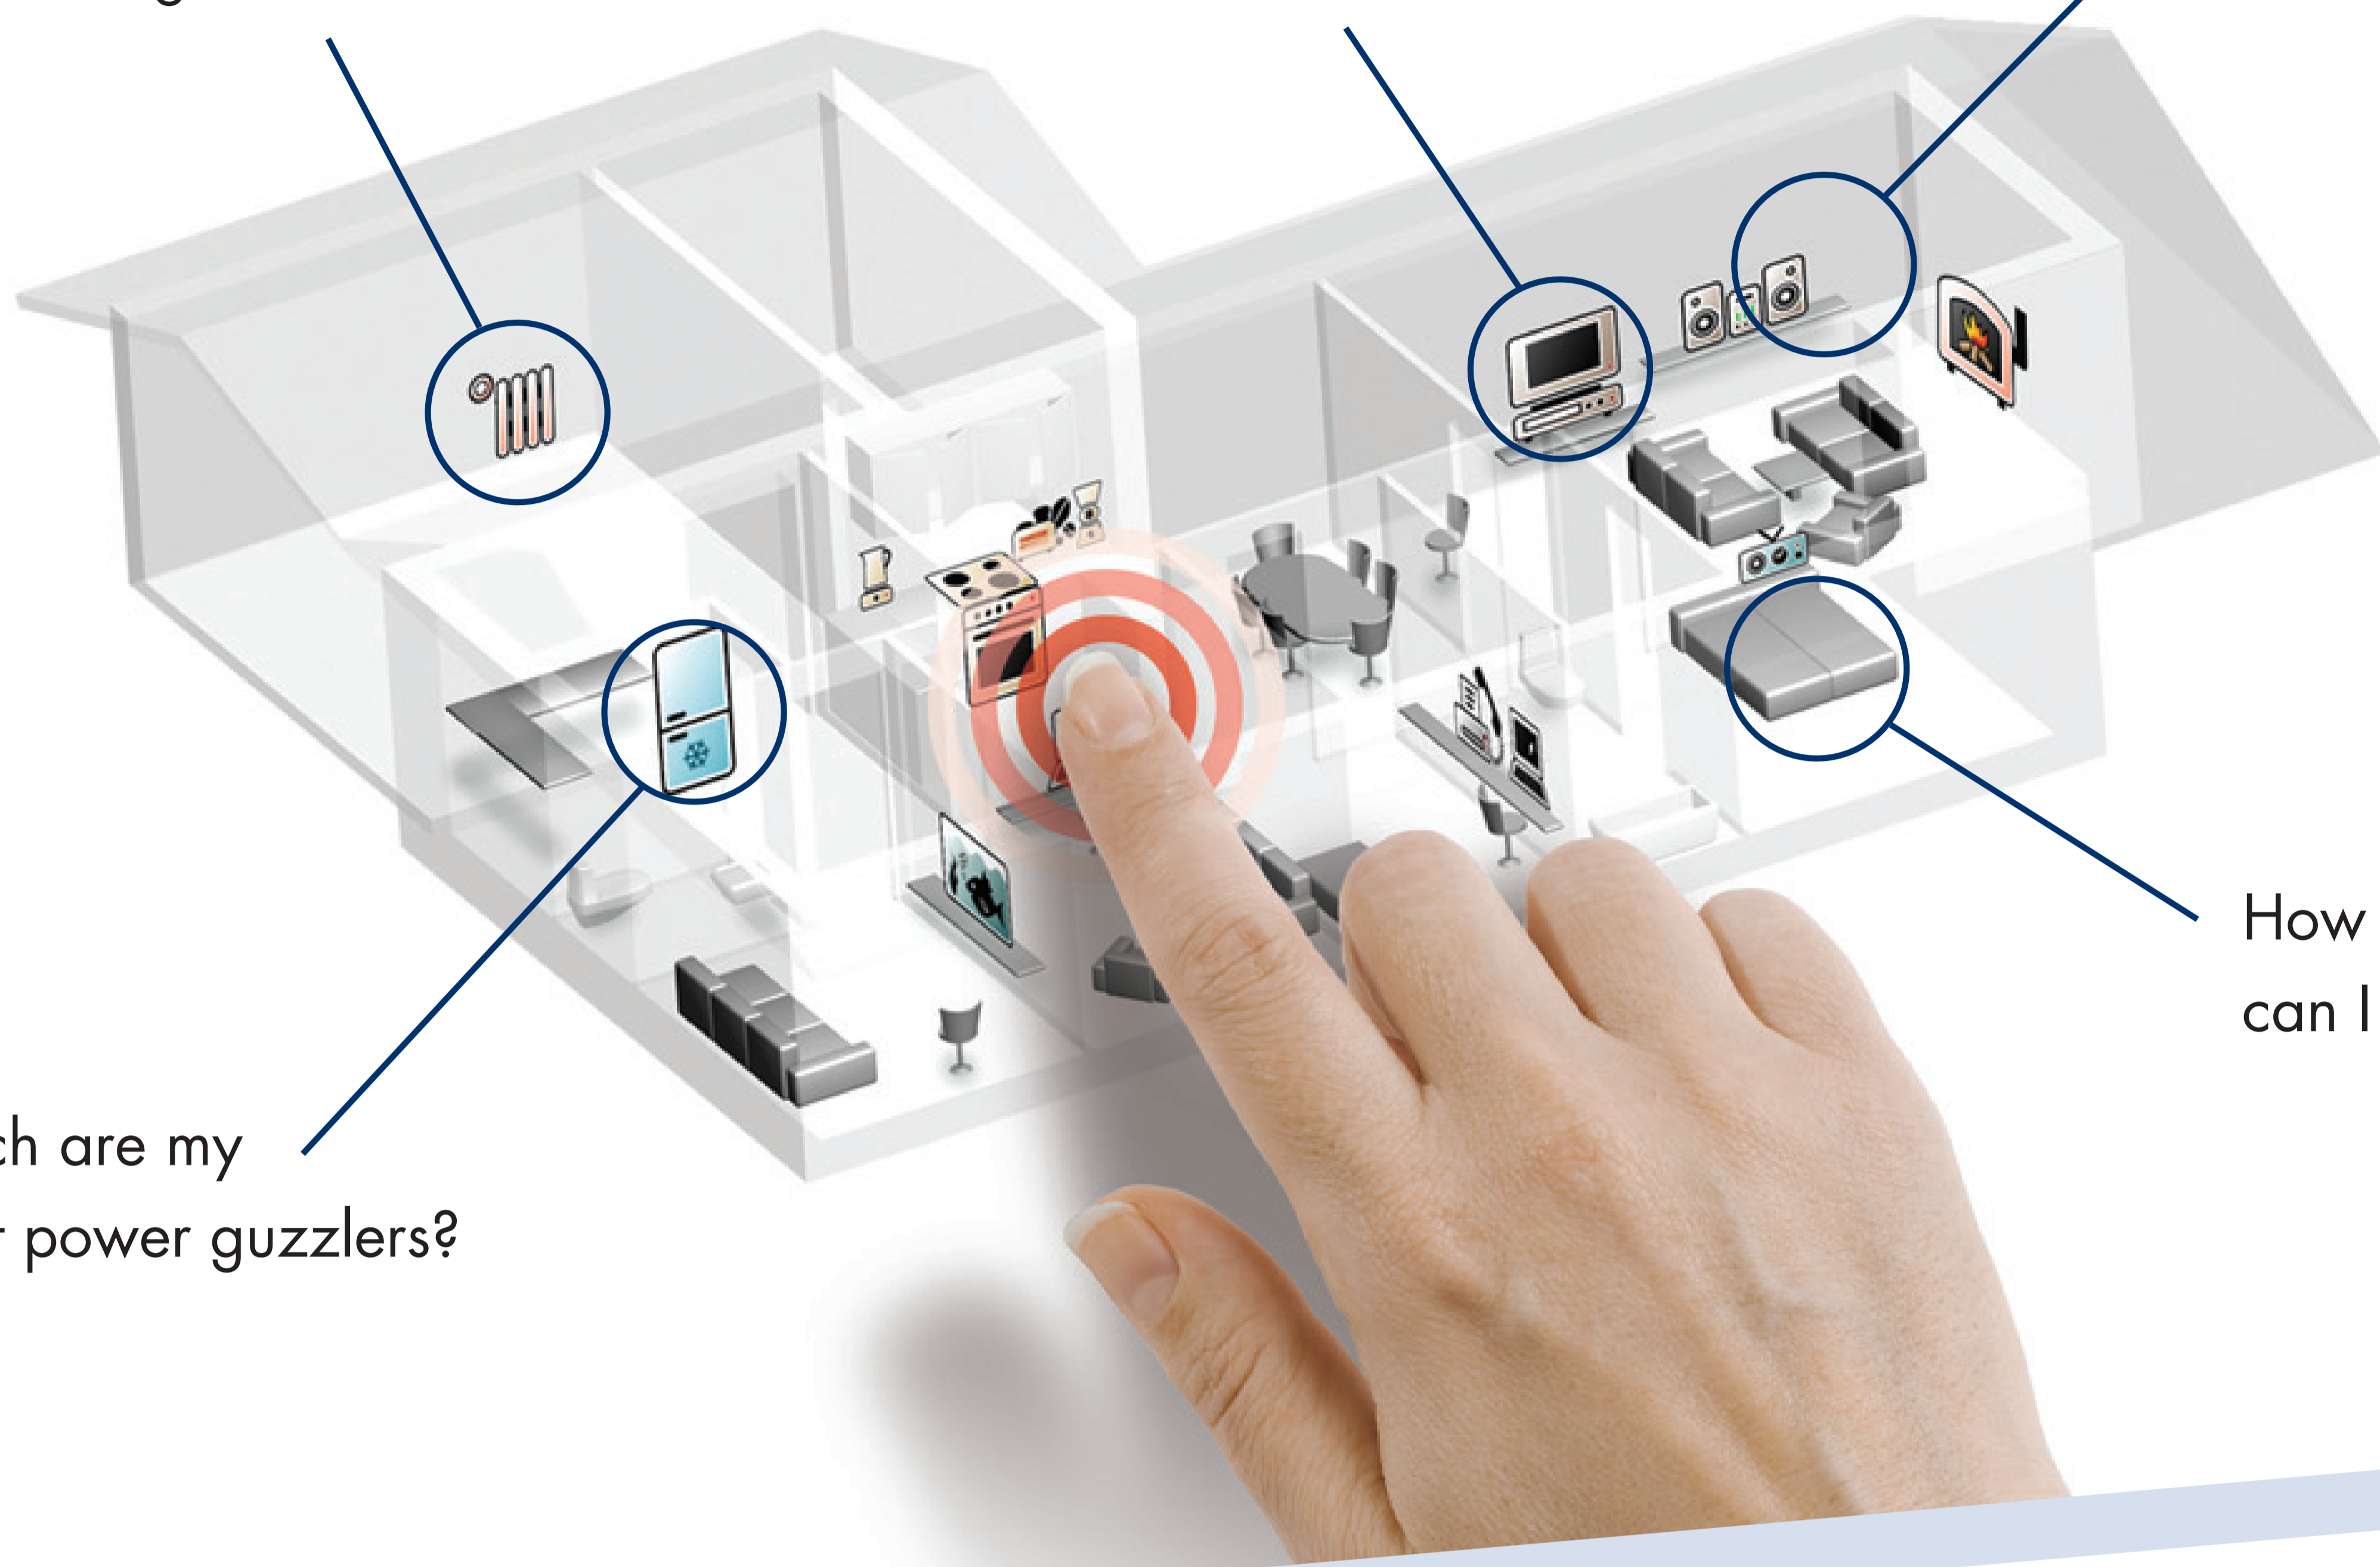

Am I getting enough out of my heating sources?

Which appliances are worth replacing?

Am I using too much electricity?

Which are my worst power guzzlers?

How much can I save?

You draw – while My Home does the maths

Make your home “intelligent”

Get started

1. draw your floorplan, and arrange with your appliances
2. get figures on how to make improvements

You can

- check if your consumption is high or low
- get information about more energy efficient alternatives
- compare your appliances with other appliances
- find the cheapest electricity company in your area
- use the floorplan to layout your furniture, etc.
- reduce your carbon footprint

Control and monitor your home

- establish rules for your home – decide the temperature in different rooms, or time the lights to switch on and off
- install local automatics – such as motion sensors for lighting
- use My Home to monitor temperatures, or the humidity level
- control all devices from a computer at home, at work, or at your holiday home, etc. – and even from your mobile phone
- set the burglar alarm from your mobile phone
- receive a message about anomalies

Control everything wirelessly

- you need a master
- all your appliances need an extra switch
- master and switch need to speak the same language: Z-Wave
- control and monitor everything from My Home

MASTER
