

## The ACEEE International Scorecard Self-Scoring Tool

The ACEEE International Scorecard Self-Scoring Tool is an analytic device that helps users develop a high-level snapshot of the overall energy efficiency of a nation, state, or province. The tool is based on the *2012 ACEEE International Energy Efficiency Scorecard*, which analyzed and ranked 12 of the world's largest economies on their overall energy efficiency. It allows users to perform similar analyses on countries of their choice and compare those results with the 12 economies analyzed by ACEEE. This tool is unique in that in addition to compiling key information specifically addressing the energy efficiency of a country, it provides complementary resources and analysis highlighting best practices and opportunities to improve while providing a benchmark against which a country's progress toward improving its energy efficiency can be compared.

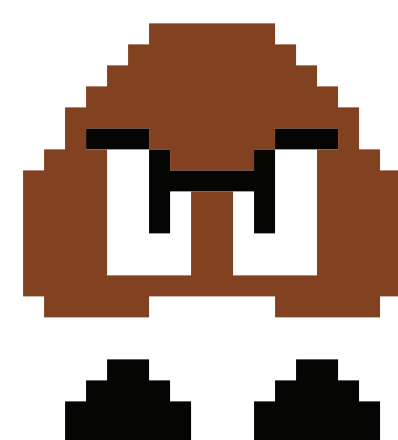

### Gather & Enter Data!

The tool helps you by recommending data sources, often with a hyperlink to that source.

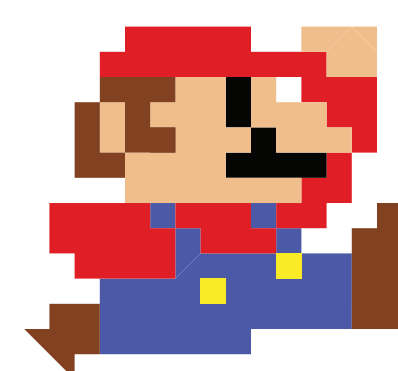

### Collect Your Score!

Your score is displayed once the data is entered, along with the scores of 12 of the world's largest economies.

### Identify Weaknesses!

The areas in which improvement is needed are made clear.

### Learn from Best Practices!

The *Scorecard* report specifies best practices in every area.

### Power Up Your Energy Efficiency!

With the results in hand, the path to a more energy efficient economy is attainable!

## Congratulations! You Saved the Kingdom!
