

# Making the local economic case for low carbon – an Oxfordshire case study

*Gavin Killip, Nick Eyre, Christian Brand, Julia Patrick*

# Summary of presentation

- Background to the project
  - Local context
  - Strategic Economic Plan
- Report findings
  - Economic analysis (comparative advantage)
  - Scenarios to 2030
- Debates with stakeholders
- Discussion

# Local economic and political context

- ~100km from London
- In the top 3 UK regions for R&D jobs
- Knowledge-based economy
- Two leading universities
- Largely affluent, educated population
- Pockets of deprivation
- Political tensions and governance issues between City and County

# Strategic Economic Plan to 2030

- €8.9 bn investment to 2030
- €9.3 bn gross value added (GVA)
- €1 bn public sector funding (~10% of total)
- Upto 100,000 new homes
- Faster broadband
- Better road network
- Better public transport

Focus on the 'knowledge spine',  
building on intellectual strengths  
(universities and industry)

# Oxfordshire's economic strengths (comparative advantage)

## All economic sectors

- Tertiary education
- Health
- Research (science & engineering)
- Engineering
- Publishing
- Market research
- Motor vehicle manufacturing
- Advertising

## Energy & Env. Sector

- Building technologies
- Alternative fuels
- Wind
- Alternative fuel vehicles
- Nuclear power
- ... and associated professional services
  
- €1.6 bn sales
- ~7% of GVA
- 8,800 jobs

# Three scenarios for infrastructure investment in Oxfordshire to 2030

Figure 5.1 Additional GVA and jobs over additional investment in transport, housing and energy infrastructure, three scenarios

# Debates with stakeholders

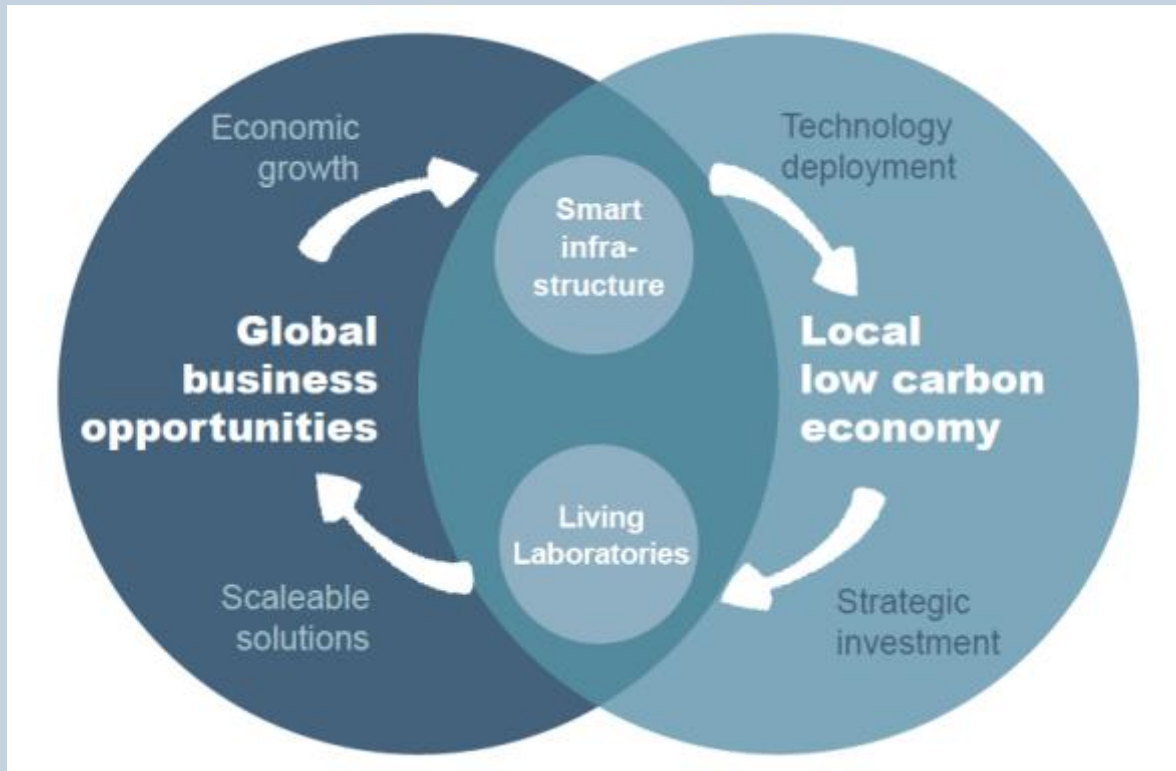

Predominant stakeholder viewpoint:

- 'Low carbon' as an economic sector
- Innovation = new technology
- The need is to identify and support technology clusters

Report authors' viewpoint:

- 'Low carbon' as a cross-cutting theme for the whole economy
- Innovation = new technology, practices, business models, social arrangements, etc
- Technology clusters in pre-determined economic sectors do not go far enough

# Living Laboratories – a way forward?

# Discussion

- A plausible local/regional strategy has to be context-specific
- A 'low carbon' strategic vision is in competition with other visions of the future
- Our quantitative analysis is imperfect ... but it helps!
- Some stakeholders wanted us to 'prove' that investment in low carbon would out-perform other kinds of investment
- Fragmented governance is a particular problem in our city region
- Current activity is about 1% of what is needed for scenario C
- Has the report made any difference?

Thank you.
