Society

From ebriety to sufficiency

**La sobriété en 6 axes stratégiques transversaux
DE L'ÉBRIETÉ À LA SOBRIÉTÉ**

Too much vs enough goods

Surabondance

Suffisance matérielle

Centralization vs Relocalization

Centralisation

Relocalisation

Paid work vs Free activities

Travail salarié

Activités gratuites

Artificialité

Adéquation nature-culture

Artificiality vs Nature/Culture Link

Culte de la vitesse

Mobilité économe

Culture of speed vs Soft mobility

Propriété
Services partagés

Owning vs Sharing

Source : Virage Energie, 2016

Three scenarios

SCENARIO 1 « Fragmented society »

Austerity, fuel poverty,
economic and social
exclusion

Very little technical
investments in changing
equipments to make
energy savings
*(33% of the theoretical
maximum potential of
energy savings)*

SCENARIO 2 « Smooth transition »

Little changes in lifestyles
and behaviours
*(in accordance with best
practices in neighbouring
countries)*

Some technical
investments in changing
equipments to make
energy savings
*(50% of the theoretical
maximum potential of energy
savings)*

SCENARIO 3 « Societal shift »

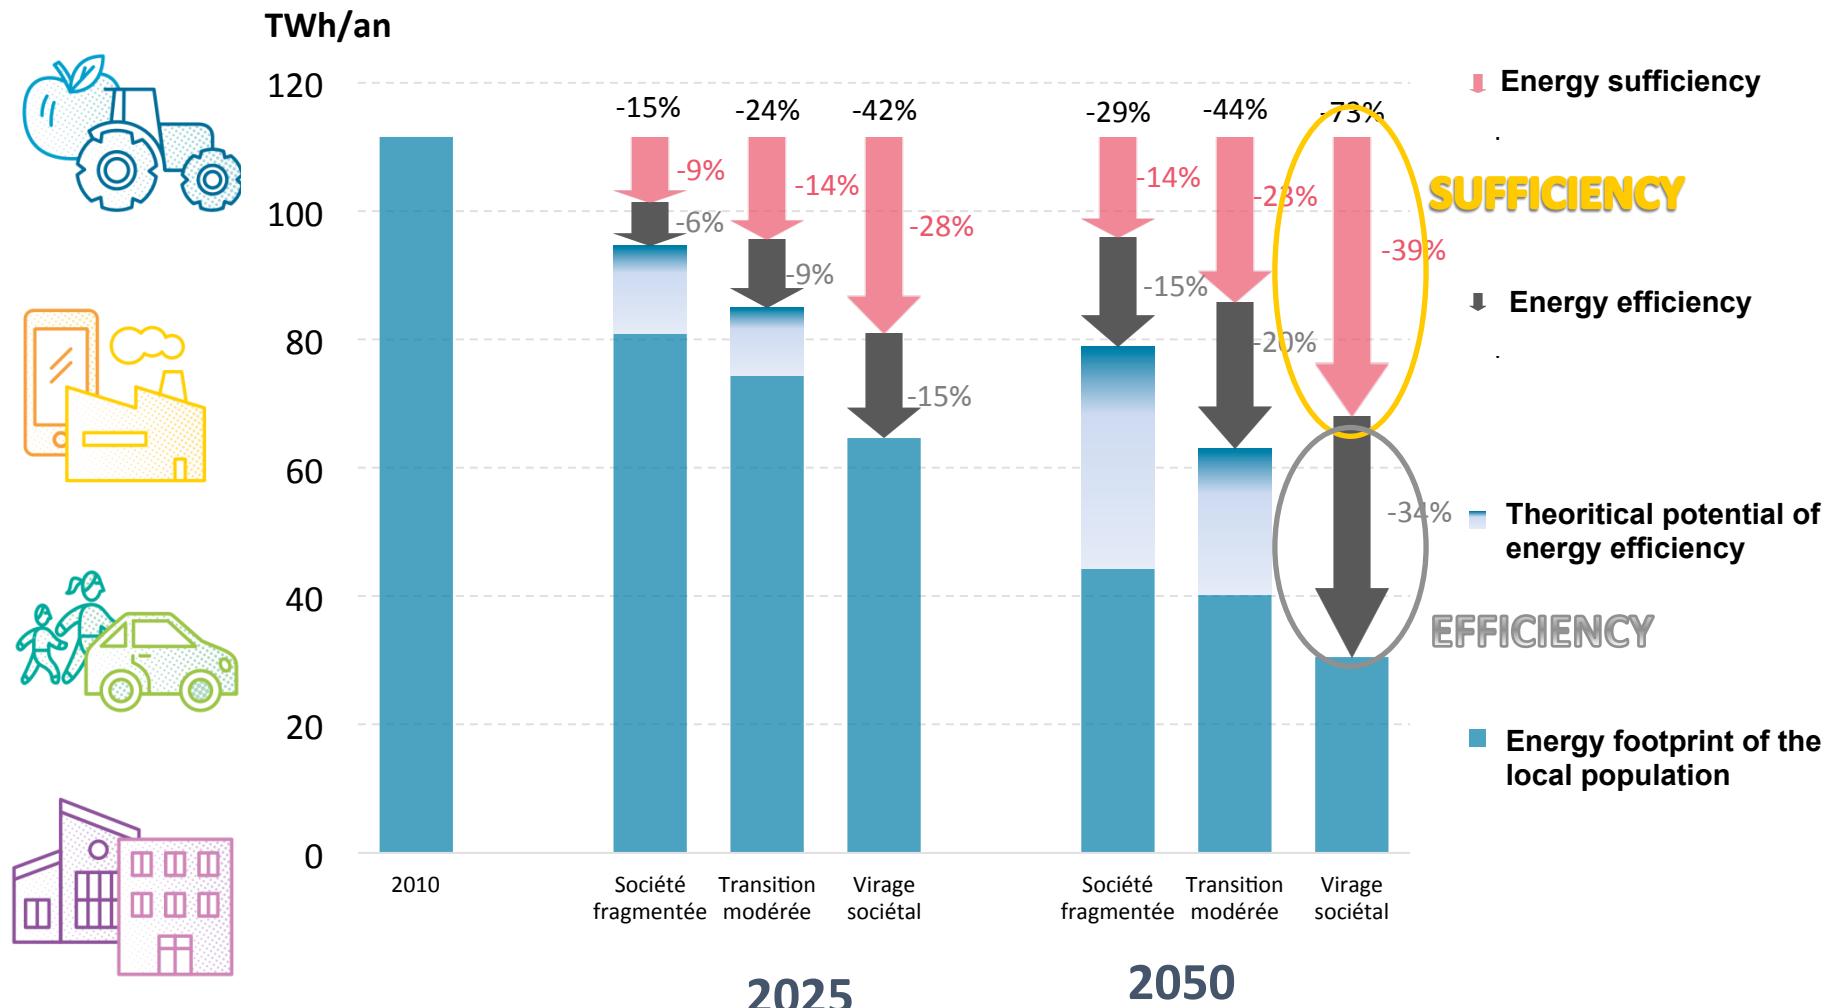

Strong political leadership
and public support for an
energy transition

Global alternatives toward
sustainable networks of
consumption, production
and exchange

A lot of technical
investments to make
energy savings
*(100% of the theoretical
maximum potential of
energy savings)*

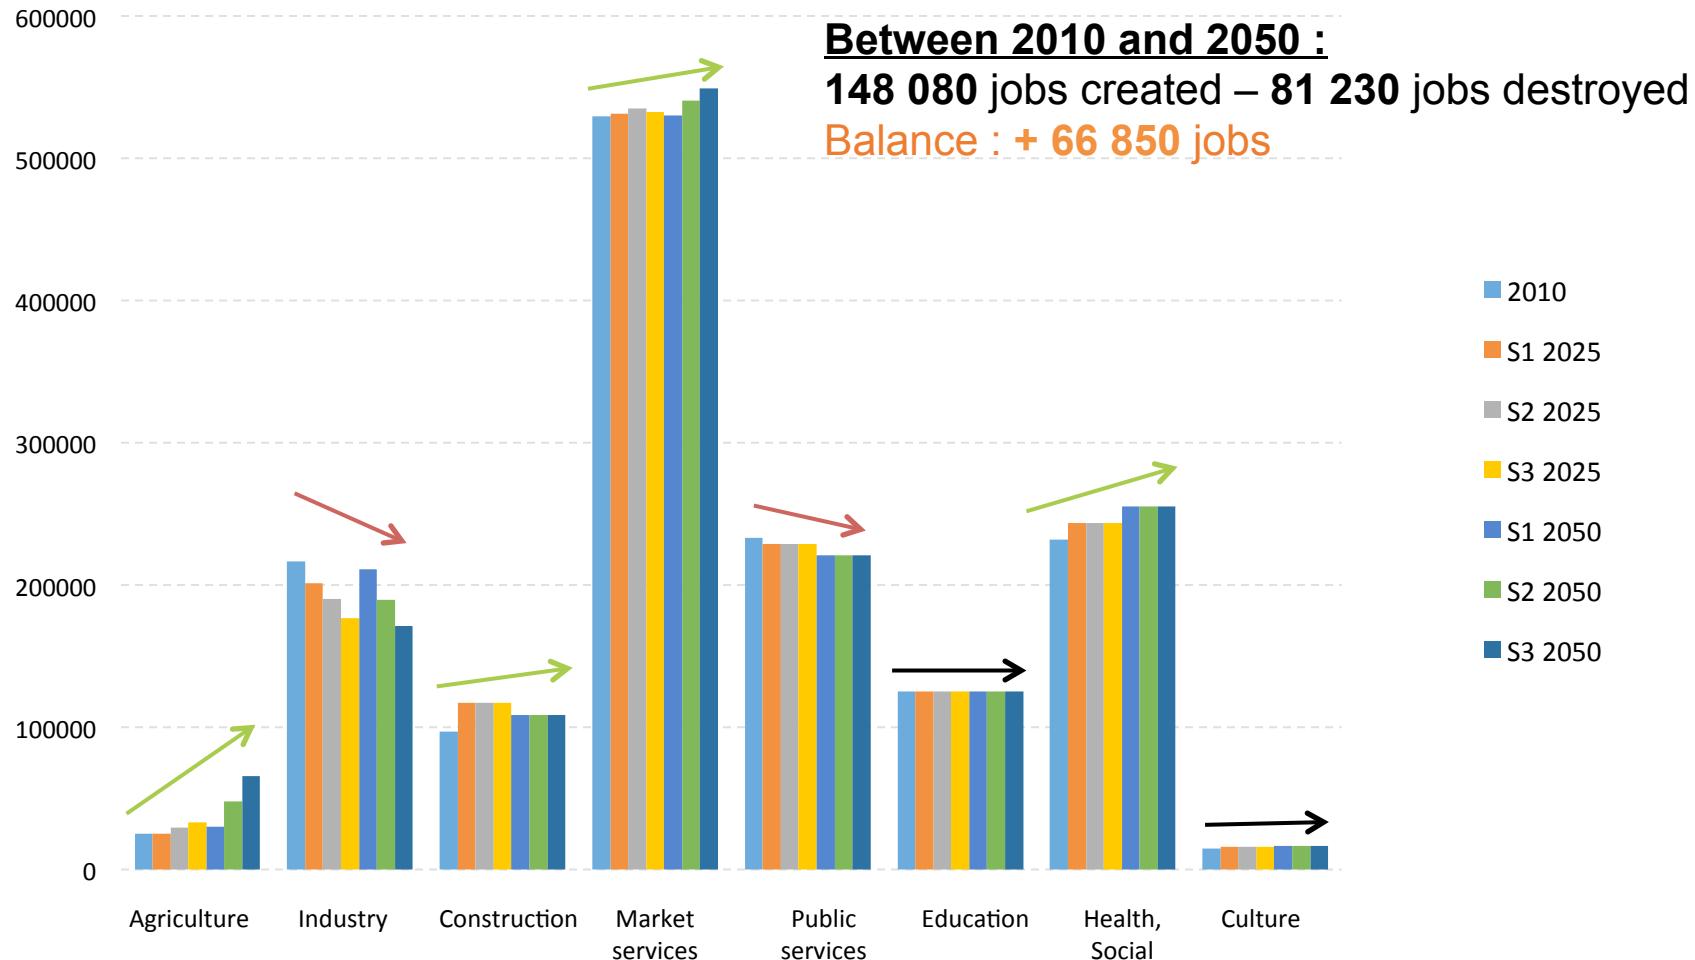

Results : energy footprint

*An energy footprint **reduction** of over 70 %*

Results : employment

Employment impacts of societal transitions among three scenarios
